# NumPy Exercises

Now that we've learned about NumPy let's test your knowledge. We'll start off with a few simple tasks, and then you'll be asked some more complicated questions.

### Import NumPy as np

In [1]:
```
import numpy as np
```

### Create an array of 10 zeros

In [7]:
```
z = np.zeros(10)
z
```

Out[7]:
```
array([0., 0., 0., 0., 0., 0., 0., 0., 0., 0.])
```

### Create an array of 10 ones

In [6]:
```
z=np.ones(10)
z
```

Out[6]:
```
array([1., 1., 1., 1., 1., 1., 1., 1., 1., 1.])
```

### Create an array of 10 fives

In [10]:
```
fives_array = np.array([5.] * 10)

fives_array
```

Out[10]:
```
array([5., 5., 5., 5., 5., 5., 5., 5., 5., 5.])
```

### Create an array of the integers from 10 to 50

In [11]:
```
integers_array = np.arange(10, 51)

integers_array
```

Out[11]:
```
array([10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26,
       27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43,
       44, 45, 46, 47, 48, 49, 50])
```

### Create an array of all the even integers from 10 to 50

In [12]:
```
even_integers_array = np.arange(10

even_integers_array
```

Out[12]:
```
array([10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42,
       44, 46, 48, 50])
```

### Create a 3x3 matrix with values ranging from 0 to 8

In [13]:
```
matrix = np.arange(9).reshape(3, 3

matrix
```

Out[13]:
```
array([[0, 1, 2],
       [3, 4, 5],
       [6, 7, 8]])
```

### Create a 3x3 identity matrix

In [16]:
```
identity_matrix = np.identity(3)

identity_matrix
```

Out[16]:
```
array([[1., 0., 0.],
       [0., 1., 0.],
       [0., 0., 1.]])
```

### Use NumPy to generate a random number between 0 and 1

In [19]:
```
random_number = np.random.rand()

random_number
```

Out[19]:
```
0.28818489089727484
```

### Use NumPy to generate an array of 25 random numbers sampled from a standard normal distribution

In [21]:
```
random_numbers = np.random.rand(25

random_numbers
```

Out[21]:
```
array([0.54320252, 0.12255061, 0.03574113, 0.44316817, 0.62299306,
       0.40250306, 0.96253512, 0.37255967, 0.41870246, 0.11498521,
       0.99733794, 0.27693735, 0.21026894, 0.36378982, 0.31725749,
       0.46187461, 0.45167626, 0.49396683, 0.08354117, 0.75840936,
       0.98592443, 0.74876035, 0.83841041, 0.67168562, 0.64182248])
```

### Create the following matrix:

In [23]:
```
matrix = np.arange(0.01, 1.01, 0.0

matrix
```

Out[23]:
```
array([[0.01, 0.02, 0.03, 0.04, 0.05, 0.06, 0.07, 0.08, 0.09, 0.1 ],
       [0.11, 0.12, 0.13, 0.14, 0.15, 0.16, 0.17, 0.18, 0.19, 0.2 ],
       [0.21, 0.22, 0.23, 0.24, 0.25, 0.26, 0.27, 0.28, 0.29, 0.3 ],
       [0.31, 0.32, 0.33, 0.34, 0.35, 0.36, 0.37, 0.38, 0.39, 0.4 ],
       [0.41, 0.42, 0.43, 0.44, 0.45, 0.46, 0.47, 0.48, 0.49, 0.5 ],
       [0.51, 0.52, 0.53, 0.54, 0.55, 0.56, 0.57, 0.58, 0.59, 0.6 ],
       [0.61, 0.62, 0.63, 0.64, 0.65, 0.66, 0.67, 0.68, 0.69, 0.7 ],
       [0.71, 0.72, 0.73, 0.74, 0.75, 0.76, 0.77, 0.78, 0.79, 0.8 ],
       [0.81, 0.82, 0.83, 0.84, 0.85, 0.86, 0.87, 0.88, 0.89, 0.9 ],
       [0.91, 0.92, 0.93, 0.94, 0.95, 0.96, 0.97, 0.98, 0.99, 1.  ]
])
```

### Create an array of 20 linearly spaced points between 0 and 1:

In [24]:
```
linear_points = np.linspace(0, 1,
linear_points
```

Out[24]:
```
array([0.        , 0.05263158, 0.10526316, 0.15789474, 0.21052632,
       0.26315789, 0.31578947, 0.36842105, 0.42105263, 0.47368421,
       0.52631579, 0.57894737, 0.63157895, 0.68421053, 0.73684211,
       0.78947368, 0.84210526, 0.89473684, 0.94736842, 1.        ])
```

## Numpy Indexing and Selection

Now you will be given a few matrices, and be asked to replicate the resulting matrix outputs:

In [25]:
```
mat = np.arange(1,26).reshape(5,5)
mat
```

Out[25]:
```
array([[ 1,  2,  3,  4,  5],
       [ 6,  7,  8,  9, 10],
       [11, 12, 13, 14, 15],
       [16, 17, 18, 19, 20],
       [21, 22, 23, 24, 25]])
```

In [ ]:
```
# WRITE CODE HERE THAT REPRODUCES
# BE CAREFUL NOT TO RUN THE CELL B
# BE ABLE TO SEE THE OUTPUT ANY MO
```

In [33]:
```
matrix = np.array([[12, 13, 14, 15
                   [17, 18, 19, 20
                   [22, 23, 24, 25

matrix
```

Out[33]:
```
array([[12, 13, 14, 15],
       [17, 18, 19, 20],
       [22, 23, 24, 25]])
```

In [ ]:
```
# WRITE CODE HERE THAT REPRODUCES
# BE CAREFUL NOT TO RUN THE CELL B
# BE ABLE TO SEE THE OUTPUT ANY MO
```

In [34]:
```
x=20
x
```

Out[34]:
```
20
```

In [ ]:
```
# WRITE CODE HERE THAT REPRODUCES
# BE CAREFUL NOT TO RUN THE CELL B
# BE ABLE TO SEE THE OUTPUT ANY MO
```

In [36]:
```
matrix = np.arange(2, 13, 5).resha

matrix
```

Out[36]:
```
array([[ 2],
       [ 7],
       [12]])
```

In [ ]:
```
# WRITE CODE HERE THAT REPRODUCES
# BE CAREFUL NOT TO RUN THE CELL B
# BE ABLE TO SEE THE OUTPUT ANY MO
```

In [37]:
```
matrix = np.arange(21, 26, 1).resh
matrix
```

Out[37]:
```
array([[21, 22, 23, 24, 25]])
```

In [ ]:
```
# WRITE CODE HERE THAT REPRODUCES
# BE CAREFUL NOT TO RUN THE CELL B
# BE ABLE TO SEE THE OUTPUT ANY MO
```

In [38]:
```
matrix = np.arange(16, 26, 1).resh
matrix
```

Out[38]:
```
array([[16, 17, 18, 19, 20],
       [21, 22, 23, 24, 25]])
```

### Now do the following

#### Get the sum of all the values in mat

In [39]:
```
sum_of_values = np.sum(mat)

print(sum_of_values)
```

```
325
```

#### Get the standard deviation of the values in mat

In [40]:
```
std_deviation = np.std(mat)

print(std_deviation)
```

```
7.211102550927978
```

#### Get the sum of all the columns in mat

In [41]:
```
sum_of_columns = np.sum(mat, axis=

sum_of_columns
```

Out[41]:
```
array([55, 60, 65, 70, 75])
```
